Build a Website for Free

A step-by-step guide using AI + GitHub Pages

`html` · `css` · `github pages` · `free`

What You'll Need

Claude or ChatGPT

Free account · sign in with Google

A Web Browser

Any browser works

VS Code *optional*

For direct edits to colors & content

GitHub Account

Free · sign in with Google

> No paid tools. No subscriptions. Nothing else.

STEP 01

Generate Your Website with AI

Open Claude or ChatGPT and use this prompt:

```
Create a personal website using only HTML and CSS deployable to GitHub Pages.
Name: [your name] · Career: [your field] · Motto: [optional]
Interests: [list] · Skills: [list] · Work history: [brief or paste resume]
Color scheme: [describe or leave blank]
Keep the design clean and professional. No JavaScript or frameworks.
```

Download the generated **HTML file**, then **double-click** it to preview in your browser.

✅ You now have a working website — running locally on your computer.

STEP 02

Refine It with AI

Not happy with something? Just ask. Be specific — the more detail, the better result.

Example prompt:

```
The header feels cramped. Increase spacing between sections, set the header background to dark navy (#0a192f) with white text, and bump the base font size to 16px.
```

- Want to edit directly? Open the file in **VS Code** or **Notepad**
- Colors, text, and layout are straightforward to adjust once you see the code
- Keep iterating until you're happy

STEP 03

Deploy to GitHub Pages

1. Go to **github.com** → create a free account (use Google sign-in)
2. Choose your **username carefully** — it appears in your URL
3. Click **+** → **New repository** → set to **Public**
4. Name it `website` or `personal-website`
5. **Upload your HTML file**
6. Go to **Settings** → **Pages**
7. Source: **Deploy from branch** → **main** → **/ (root)** → Save

⏳ Wait 1–3 minutes for GitHub to build your site.

Your Website is Live 🎉

🔗 `https://yourusername.github.io/website`

Shareable with anyone, anywhere in the world — **completely free**.

What you used:

✦ AI to generate the code ✦ GitHub to host it for free
✦ Zero dollars spent ✦ Zero lines of code written

That's It.

This is only a fraction of what AI can do.

Share this with a friend who's been putting off building their site.
